Vizor PS Assistant

New chat ■ Stop Service

You: hi

AI: Hello! How can I assist you with the Vizor product today? Feel free to ask any questions.

You: nothing, just want to say hi

AI: Hi there! Nice to connect. If you have any questions about the Vizor product or need help with anything, feel free to ask!

You: I have a question to ask you: 'when I try to open VizorSupervisionCentre' I got error: 'Invalid object name 'releases', I remember I had seen this error in my 2026 Regnology Q1,2.pdf, can you check?

AI: Certainly! Based on the documentation provided, it seems that the error "Invalid object name 'releases'" is mentioned multiple times without any specific resolution or context. Here are a few points to consider:- The error appears in relation to accessing certain parts of the Vizor product or its underlying codebase.- It might be related to issues with database objects or configurations.To resolve this issue, you may want to:1. Check if the 'releases' table or object exists in your database.2. Ensure that all necessary migrations have been applied correctly.3. Consult the Vizor documentation or reach out to support for more specific guidance related to this error.If you need further assistance or additional context, feel free to ask!

You: thanks

AI: You're welcome! If you have any more questions or need further assistance, feel free to ask. Happy to help!
